Funlab-users-additional-lab

In this lab you will create a user, and give the user a password.
Then you will su to that new user and create a file in the user's login directory and in the /tmp directory.

Then you will delete the user and find out that the userdirectory and the file in there are gone.
Also you will find out that the file in /tmp is still there.

1. Create a user with your own name and give the user a password.

2. In the login directory of the user create a file called: myfile1.
   In /tmp create a file called: `myfile2`

3. Delete the user and the user's logindir with a single command.

4. Who is the owner of `/tmp/myfile2`?
   Why is that?

5. Create a new user with the name of your favorite animal.

6. Who is the owner of your the file you created in `/tmp`?
   Why is that?
