

Portsets

In addition to using [Selective LUN Map \(SLM\)](#), you can create a portset and bind the portset to an igroup to further limit which LIFs can be used by an initiator to access a LUN.

If you do not bind a portset to an igroup, then all of the initiators in the igroup can access mapped LUNs through all of the LIFs on the node owning the LUN and the owning node's HA partner.

```
Clustershell*> lun portset show
```
