

Additional exercise Containers

1. Login to ntnx-2 Prism Element.
2. Create a Storage Container with your own name.
3. Make sure that the container can maximally contain 50GB of data.
4. Make sure that the container can be accessed via NFS by all clients in the same subnet.
5. From the linux machine mount the container to a local mountpoint.
6. On the linux machine copy the rocky.iso file from /mnt/iso to your mounted container.
7. Check how much space is now used by your new container.
