

## Create and Deploy an OVA.

In Prism Central.

Open Compute&Storage

- Select **VMs** and create a new VM on a single cluster.
- Make sure the VM uses the **tiny.img** as its boot device
  - hint: **Attach Disk** “**Type: Disk**”  
“**Operation: Clone from Image**”  
“**Image: tiny.img**”

Leave everything else to the default settings.

Select the VM and open “**Actions**”

Scroll down and export as OVA.

- Enter the OVA name
- Leave QCOW2 default
- Click Export

In Compute&Storage

- Select OVAs
- “**tiny-ova**” should be there...
- Select it and from actions “**deploy as VM**”

In Compute&Storage

- Select OVAs
- Deploy the new OVA as VM
