

ncli storage

1. using ncli, list the following:

what is your storage pool?
(what is the physical capacity?)
(what is the used capacity?)

what are the present containers?

2. Create a container with the name: small
Advertised capacity 5(G)

example:

1. `ncli sp list`
`ncli container list | grep Name`
2. `container create sp-name=default-storage-pool-29975109849298 \`
`adv-capacity=5 name=small`
